SUMMARY

Senior Frontend Engineer specializing in React and Angular, enterprise-scale architecture, and high-performance financial applications. Proven track record of leading multiple client implementations from development through successful production go-live, driving business impact and user adoption. Expert in building scalable UI systems, optimizing developer workflows with AI tooling, and mentoring engineers. Known for delivering clean, maintainable code in fast-paced, client-facing environments.

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer

Backbase • Atlanta, GA | 04/2021 – Present

Architected and delivered enterprise financial web applications using Angular (v19+), TypeScript, Nx monorepos and modular frontend design patterns.

Successfully contributed to and helped lead multiple client go-lives, ensuring production readiness, performance, and scalability under real-world usage.

Owned frontend architecture decisions, including state management (NgRx), application structure, and performance optimization strategies.

Led Angular modernization efforts, upgrading legacy applications and improving maintainability.

Built scalable styling systems using the modern SASS module architecture.

Integrated complex financial APIs and third-party systems including Payveris, Yodlee Fastlink, and Zelle.

Leveraged AI-powered development tools (Cursor, Gemini CLI, GitHub Copilot, Claude-code) to accelerate delivery and improve code quality.

Partnered with product managers and designers to deliver high-quality, user-centric experiences.

Mentored junior engineers and conducted code reviews to elevate team standards.

Delivered internal workshops on Angular advancements and best practices.

Maintained frontend mock services running on a Node.js/Express server, enabling parallel development across client teams and reducing integration bottlenecks.

Assisted with Java backend migrations, collaborating with backend engineers to align API contracts and ensure seamless frontend compatibility.

Software Engineering Consultant

EY (Ernst & Young) • Atlanta, GA | 02/2019 – 11/2020

Developed and maintained a scalable MEAN stack application used for internal self-service workflows.

Built robust frontend features using Angular (v7+), focusing on maintainability and performance.

Contributed to a .NET microservices ecosystem, integrating frontend applications with distributed backend services.

Designed and implemented role-based access control (RBAC) systems.

Developed data migration and automation scripts using JavaScript and MySQL.

Acted as interim team lead during a critical transition period.

Delivered client-facing demos and presentations.

PROJECTS & ENTREPRENEURSHIP

LeadThaw — Founder & Full-Stack Engineer | leadthaw.com

Live product

Built and shipped a daily sales engagement inbox using Next.js 16, React 19, TypeScript, and Tailwind CSS.

Backend: Supabase (PostgreSQL) with Supabase Auth for user management.

Integrated Stripe for subscription billing and Resend for transactional email.

Deployed on Vercel with focus on performance and reliability.

TECHNICAL EXPERTISE

Frontend Architecture: **Nx, Next.js, React, Angular (v7–19+), TypeScript, JavaScript, NgRx**

Styling Systems: **Tailwind CSS, Modern SASS (module system), CSS3, responsive design**

Backend & APIs: **Node.js, Express, Supabase, Java, REST APIs, .NET Microservices**

Databases: **PostgreSQL, MongoDB, MySQL**

DevOps: **Docker, Jenkins, CI/CD pipelines, Git, Vercel**

AI Tools: **Cursor, Gemini CLI, GitHub Copilot, Claude-code**

Other: **Performance Optimization, Microservices Integration, Agile/Scrum**

KEY VALUE HIGHLIGHTS

Delivered multiple enterprise applications to production supporting real financial users

Strong experience modernizing legacy systems into scalable architectures

Combines technical depth with business impact; proven full-stack engineer and founder

Early adopter of AI-assisted development workflows

Strong understanding of AI orchestration, tool chaining and other OpenAI concepts

Proven ability to mentor engineers and improve team performance

EDUCATION

Strayer University

Information Technology • 2019

Georgia Institute of Technology

Full Stack Development • 2019

West Georgia Technical College

Computer Programming & Support • 2018
